

VENI VIDI

A capsule for all the stories you've been part of

Andy Wang, Will Ma, Xiaowen Ma

Purpose

- People read books but don't remember them
- People watch movies but don't remember them
- People play games but don't remember them
- And no doubt they don't remember the 107 Netflix shows they watched

***“VENI VIDI* helps users remember, revisit, and reflect.”**

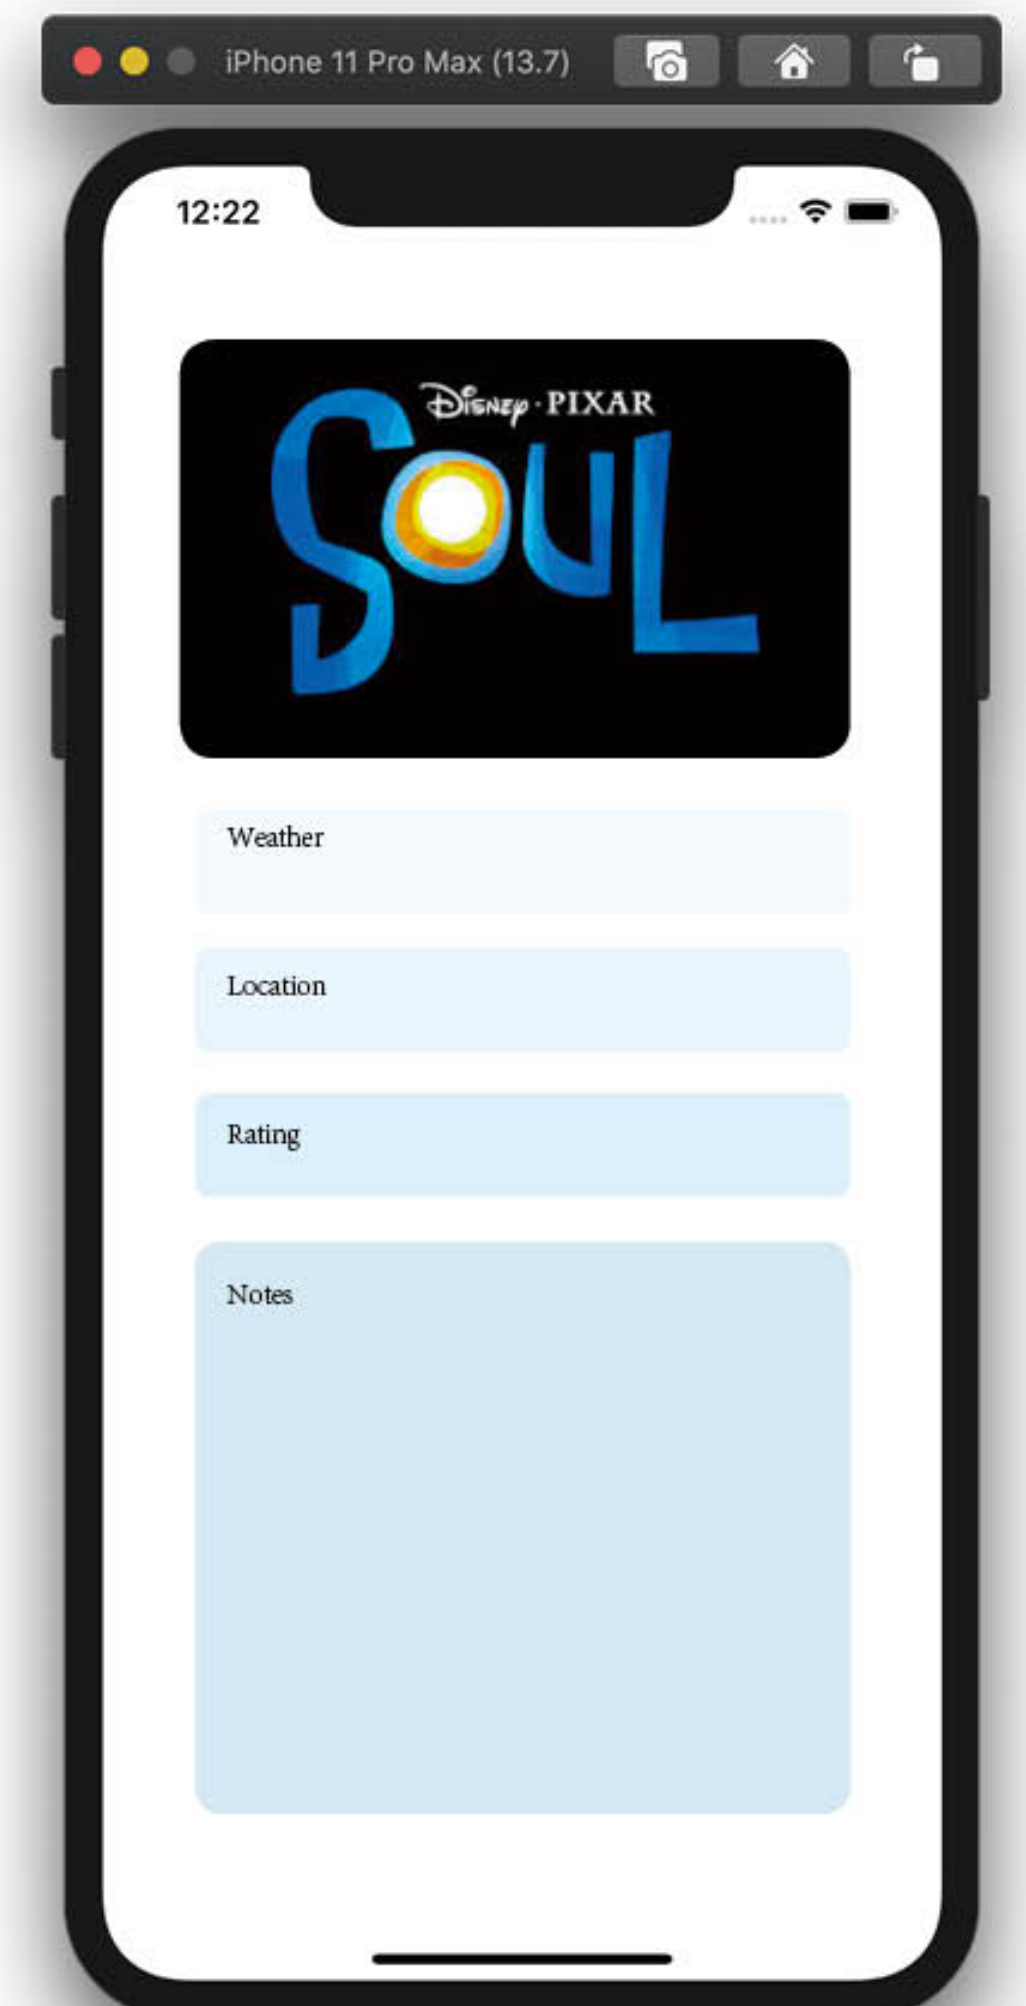

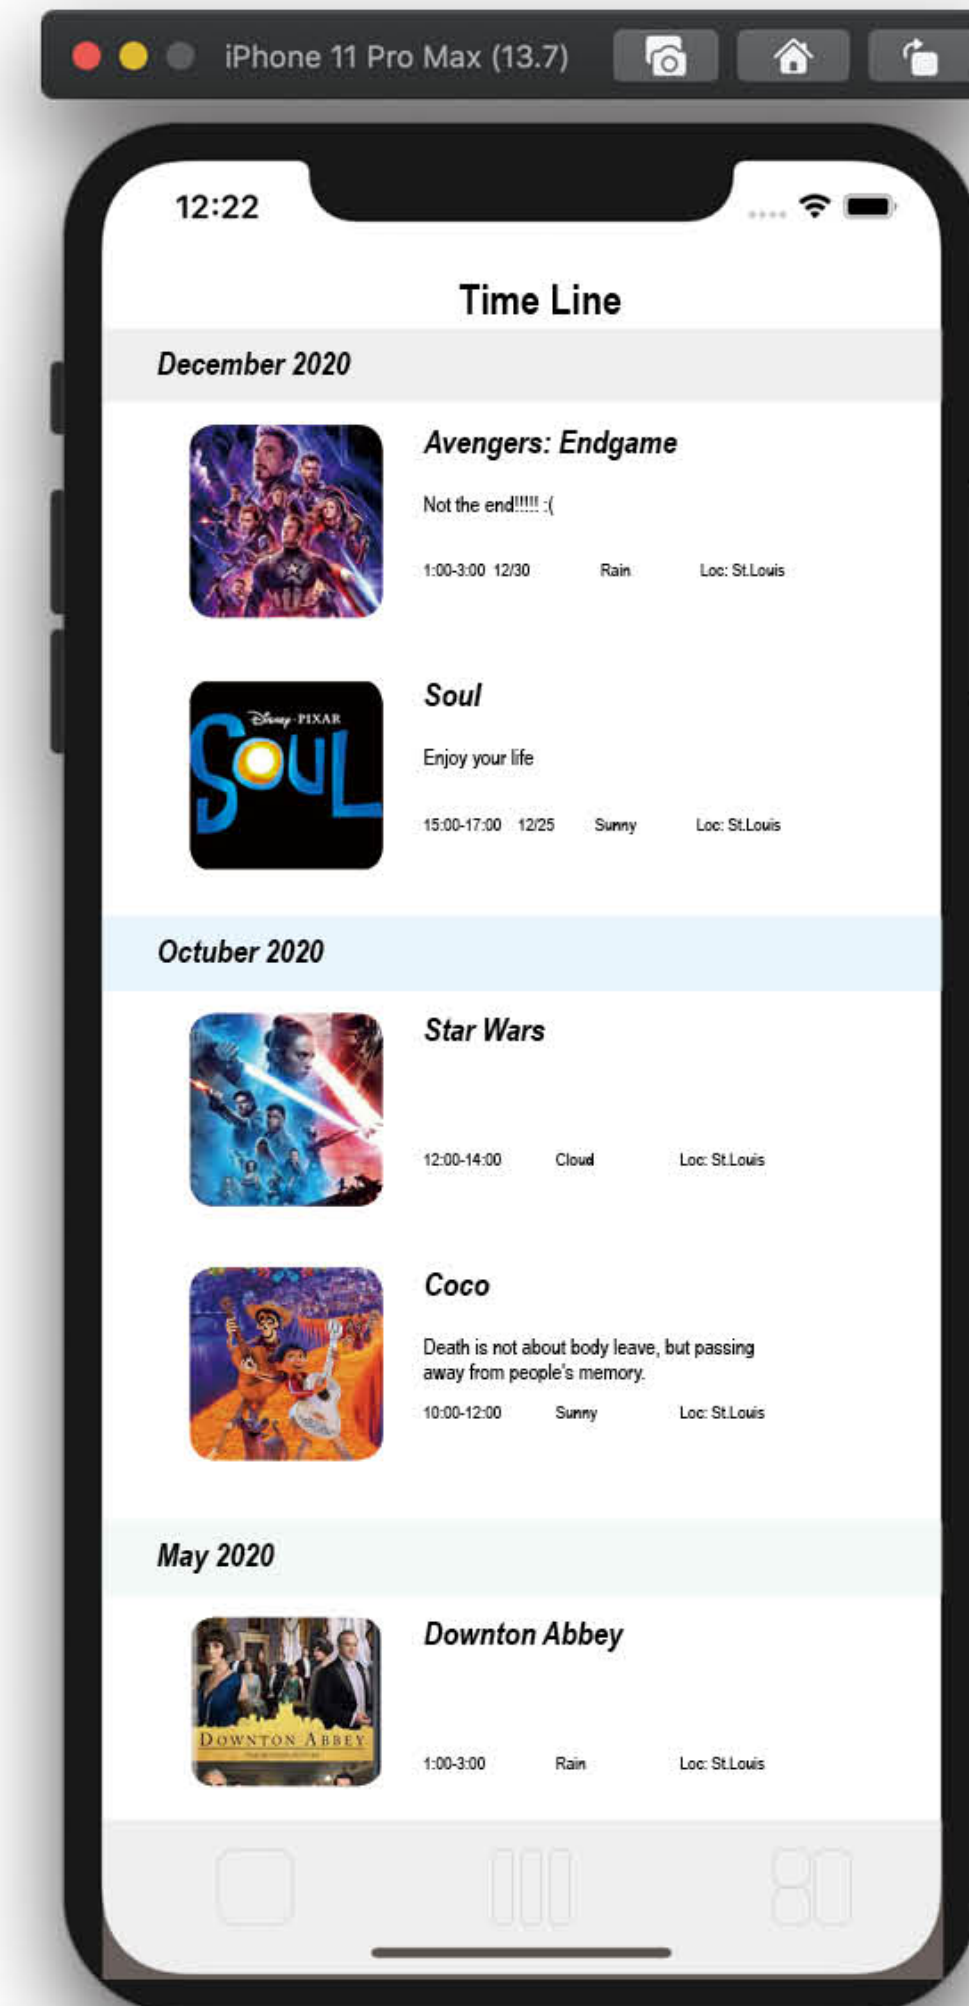

— Old York Times, Best App of the Year

Target User

- Individuals who like to keep track of the books, movies, TV shows they read/watched
- Gamers can also be included by allowing users to record games they finished as well

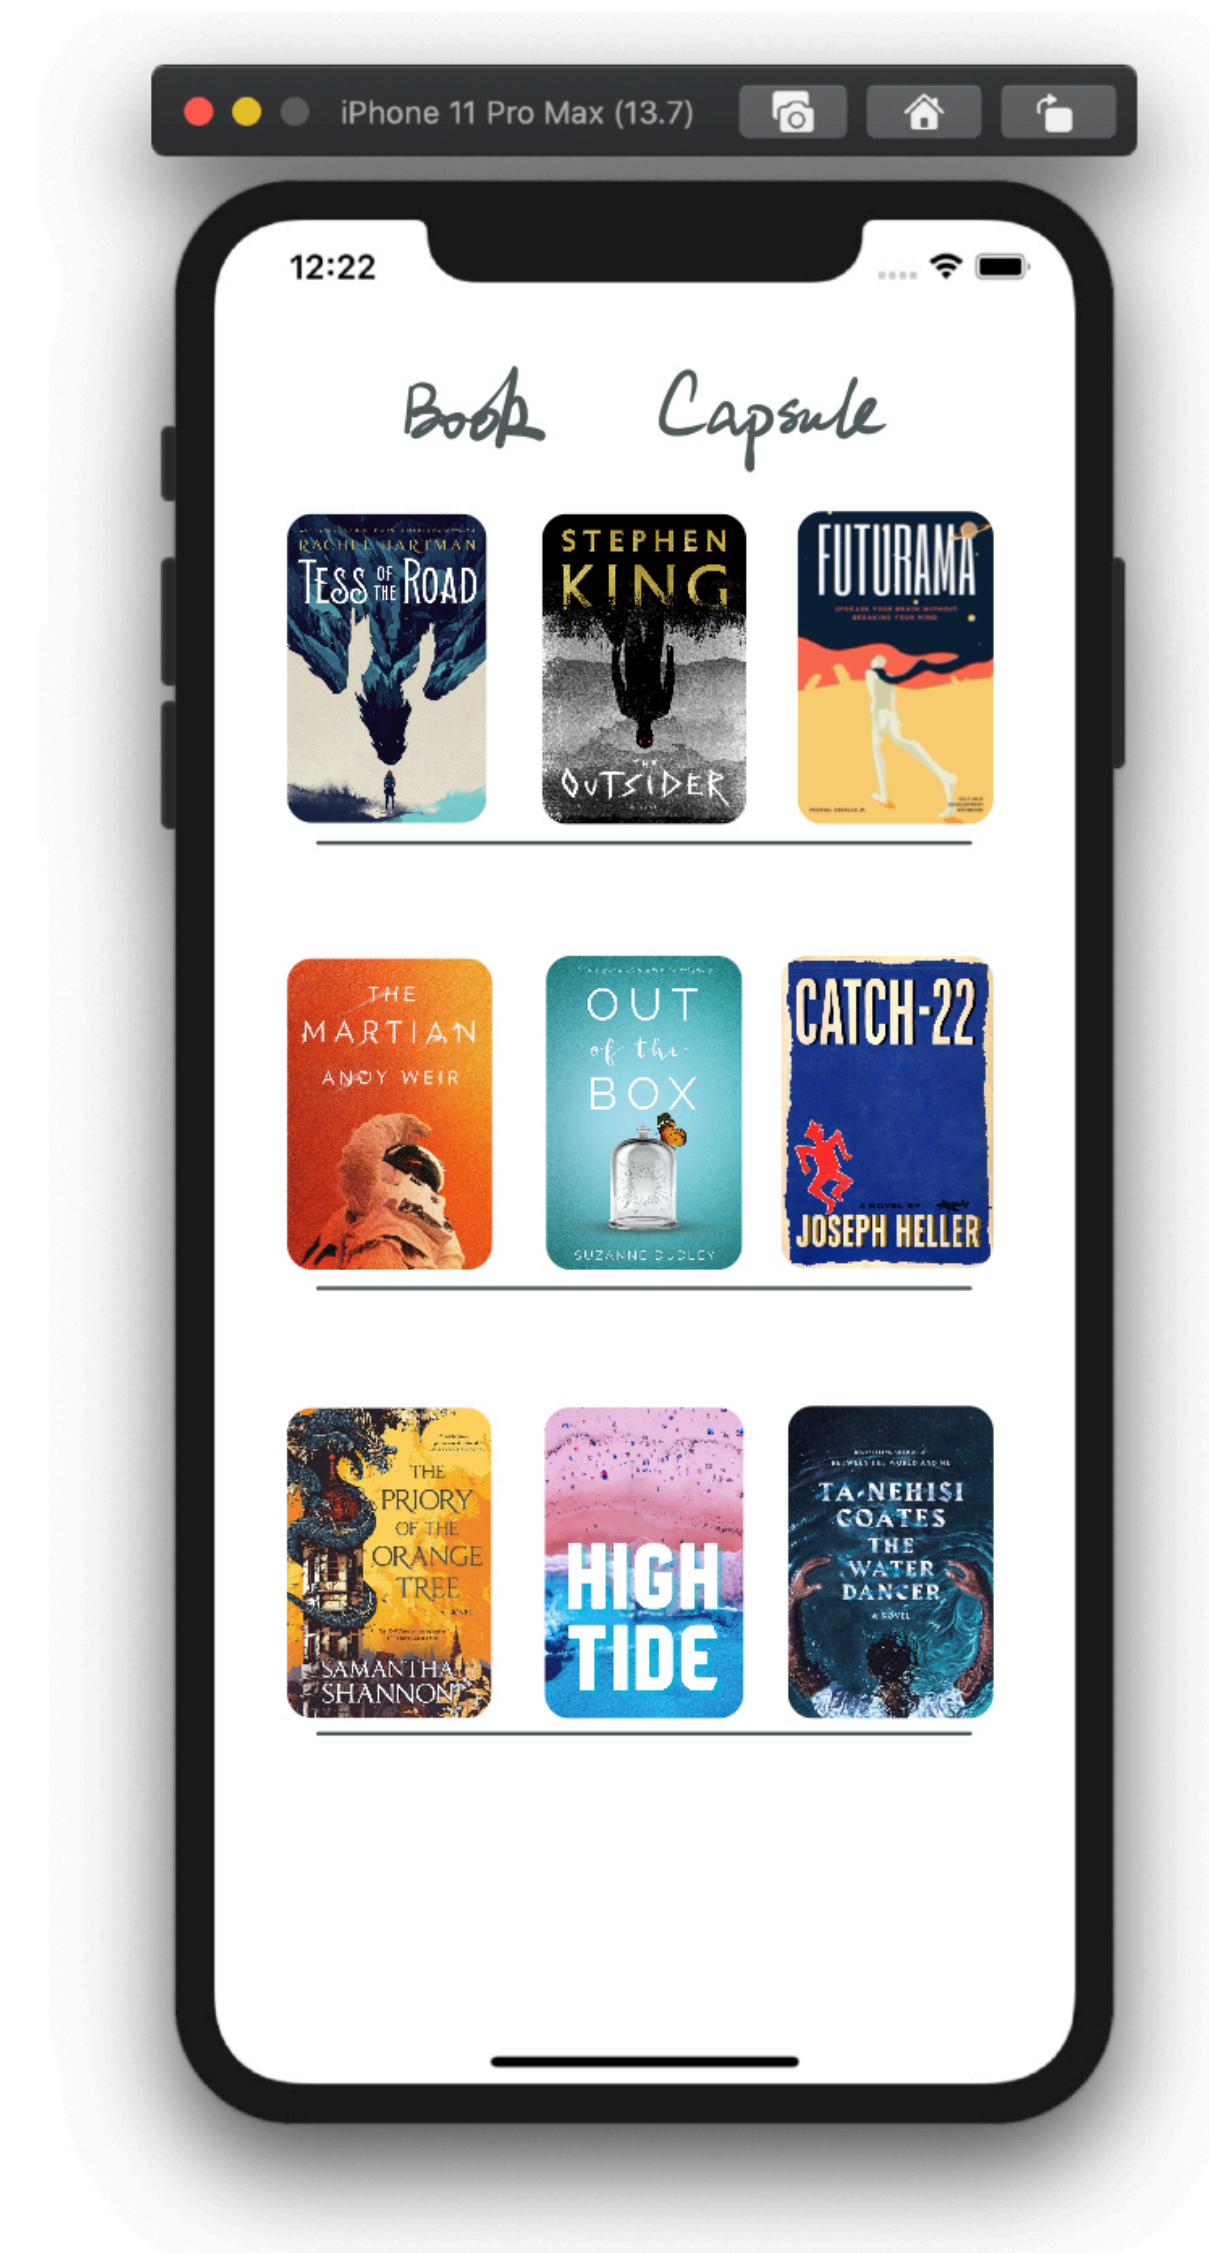

Core Features

- Record all entries and display in timeline
- Automatically retrieve book/movie/TV show/game cover photos from API
- User can set filter in timeline to display entries related to only books/movies/TV shows/games
- Show entry summary for certain timeframe, using text cloud or matrix of cover photos

Additional Features

- Additional ways to display entries, such as floating text
- Book-entries can be displayed on “book shelves”
- Click floating text or book covers to expand for details

R&D Features

- Recommend next movie/TV show/book/game based on past user entry
- Display entry point summary in yearly calendar view
- iCloud backup & syncing

Group Formation
